## Geostrategy & World Economics

### Globalization Management - Strategic Analysis, Research & Development

World Capital Forum. Com is as Executive Advisory Services Company promoting world cognition through highlighting future challenges, scientific / applied research and inter- disciplinary exchange of ideas and thoughts for professionals in advanced learning and thinking organizations seeking new opportunities to improve human conditions and economic efficiencies, awareness and incentives for challenging new and critical Thinking, Learning and Discussions on the Future Development of the World Society inspired by liberal, creative and imaginative Thoughts, Ideas and Strategies to enhance Enlightenment and Life Quality. Global business operations as well as the implementation of business policies are directed on opportunities and minimizing threats and risk factors. Countries, regions and locations are changing their economic and political structures, functions and processes, hence their strategic meaning within the globalization process, the world economy, the regional and local markets. Continuously changing variables, shifting factors and complex systems require a sophisticated method in problem recognition, policy and strategy formulation, and decision taking. Here, we are striving to support client's awareness and judgment on leading topics moving the world at present as well as in the future.

World Economic Research & Development, here especially Scientific Economic & Management Research, is the critical and enlightening interface between the ever changing political & economic environment and market variables, policy risk, decision making and strategy implementation, and the self sustaining performance to meet competitive advantage and the challenge of the globalization process. Divers structures and functions, complexity and uncertainties of markets and profit related areas are enforcing the meaning of Scenario & Futures Management, which requires a management concept that comprising an underlying combination of different strategies in international relations and geopolitics, economics and finance; it is essential to international firms to apply the method and tools of risk analysis, scenarios and cross-border strategies for decision taking towards investments and strategic operations on world markets.

Scenario & Futures Management is enhancing the chances of succeeding in investment strategy / policy implementation on projects or other entrepreneurial undertaking within the constraints of time and space, efficiency, cost and performance. Science and Philosophy, in particular based on the European Enlightenment, is providing supportive methods and tools for the decision taking process. It is empowering to rationalize the comprehensive decision taking process and identifying not only policy decisions, but also problem solving approaches. Philosophy provides the method in order to compose and formulate the right strategy meeting the appropriate alternative and highest possible option. Further, it is enhancing the efficiency not only in the implementation of business policies, but also in the process of business operations. The application of the philosophical methods will help

-  
improving strategy formulation and the quality of decision taking for meeting the right market opportunity and business efficiency,  
-

facilitating problem solving and enhance decision making through excellence in scientific and real world research and by identifying future economic challenges and investment potential within the Global Business Environment,

-  
generating ideas, concepts and strategies through imaginative, methodical and creative thinking and science based real world applications for leveraging visions towards future leadership on global markets,

-  
supporting professionals in their decision taking by managing the complexity of the future world economy to gain and sustain leadership and competitive advantage,

These competencies are targeted on managing the Real World System consisting of complex interrelating parameters and variables. They are determining management, capital investment, entrepreneurial undertaking and macroeconomic co-ordination. Risk exposure to structures, functions and processes of the Real World System and its governance requires risk cognition and management guided by concepts, strategies and policies based on philosophical methods. The process of generating positive macro- and microeconomic returns through profitability, productivity, efficiency and allocation of resources towards wealth and life quality is mostly associated with value creation as result of core competencies in managing finance and intellectual capital, variables and endowments in countries and regional economies.
